

December 2003: Santa Barbara, CA

Richards-Zeta Announces the release of Web Express

CLICK. DRAG. DROP. That's All You Need to Know. Now create custom web-pages with live, real-time data, with the click of a mouse. Richards-Zeta's Web Express tool is a single browser-based interface for facility systems and equipment. Simplifying equipment management and lowering costs.

Using RZ's Mediator platform as the foundation, you can easily turn thick-client systems into full-featured, customized HTML interfaces. Use the Mediator's Configuration Tool to autodiscover hundreds of data points from disparate protocols, find the point in Web Express GUI and drop the point on any webpage.

RZ's vision and mission rests upon providing solutions for all types of facility needs. With that in mind, our solutions do not require replacement of your existing systems interfaces, but rather they integrate and extend thick-client applications, leveraging existing assets, and migrating your system into a pure browser-based, web architecture. RZ's migration path to openness. This migration is necessary on your end and provides both local and enterprise benefits. Locally, you may securely access information anytime, anywhere, via only a standard web browser. Enterprise benefits include complete application integration via XML and SOAP. Rid yourself of the vulnerability your business will encounter when being left behind while the industry floods towards a truly unconventional philosophy, the vertical and open migration to true IT.

About Richards-Zeta. Richards-Zeta Building Intelligence, Inc. (RZ), located in Santa Barbara, CA, has been a leader in the building automation industry since 1988. The first company in Building Automation to introduce graphical programming –making the implementation and management of building controls easy to use. Innovative and powerful, RZ's graphical software allows simple project programming and management. Serviced through a worldwide network of dealers, Richards-Zeta currently runs countless buildings including airports, Class A commercial office buildings, Government facilities, hospitals and schools.
